PROJECT DESCRIPTION

THE MAIN AIRPORT AT GARDERMOEN, about 60 km from the center of Oslo, was built in the period 1994 – 1998, and allows today 23 million passengers to travel to and from annually. Today the capacity of Oslo Airport is fully utilized, and it was therefore decided in 2010 to expand the airport to meet the future demands.

At a cost of 14 billion NOK (approx.. EURO 1,5 billion) the expansion includes extension of the existing terminal with a new pier and a new departure and arrival hall. According to the plan, the new Oslo Airport will be completed in 2017 allowing 28 million passengers to travel to and from the airport every year.

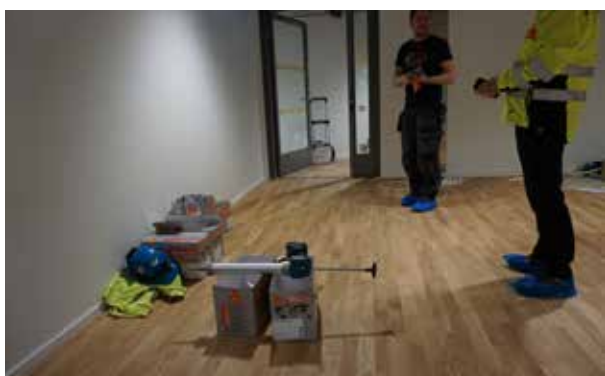

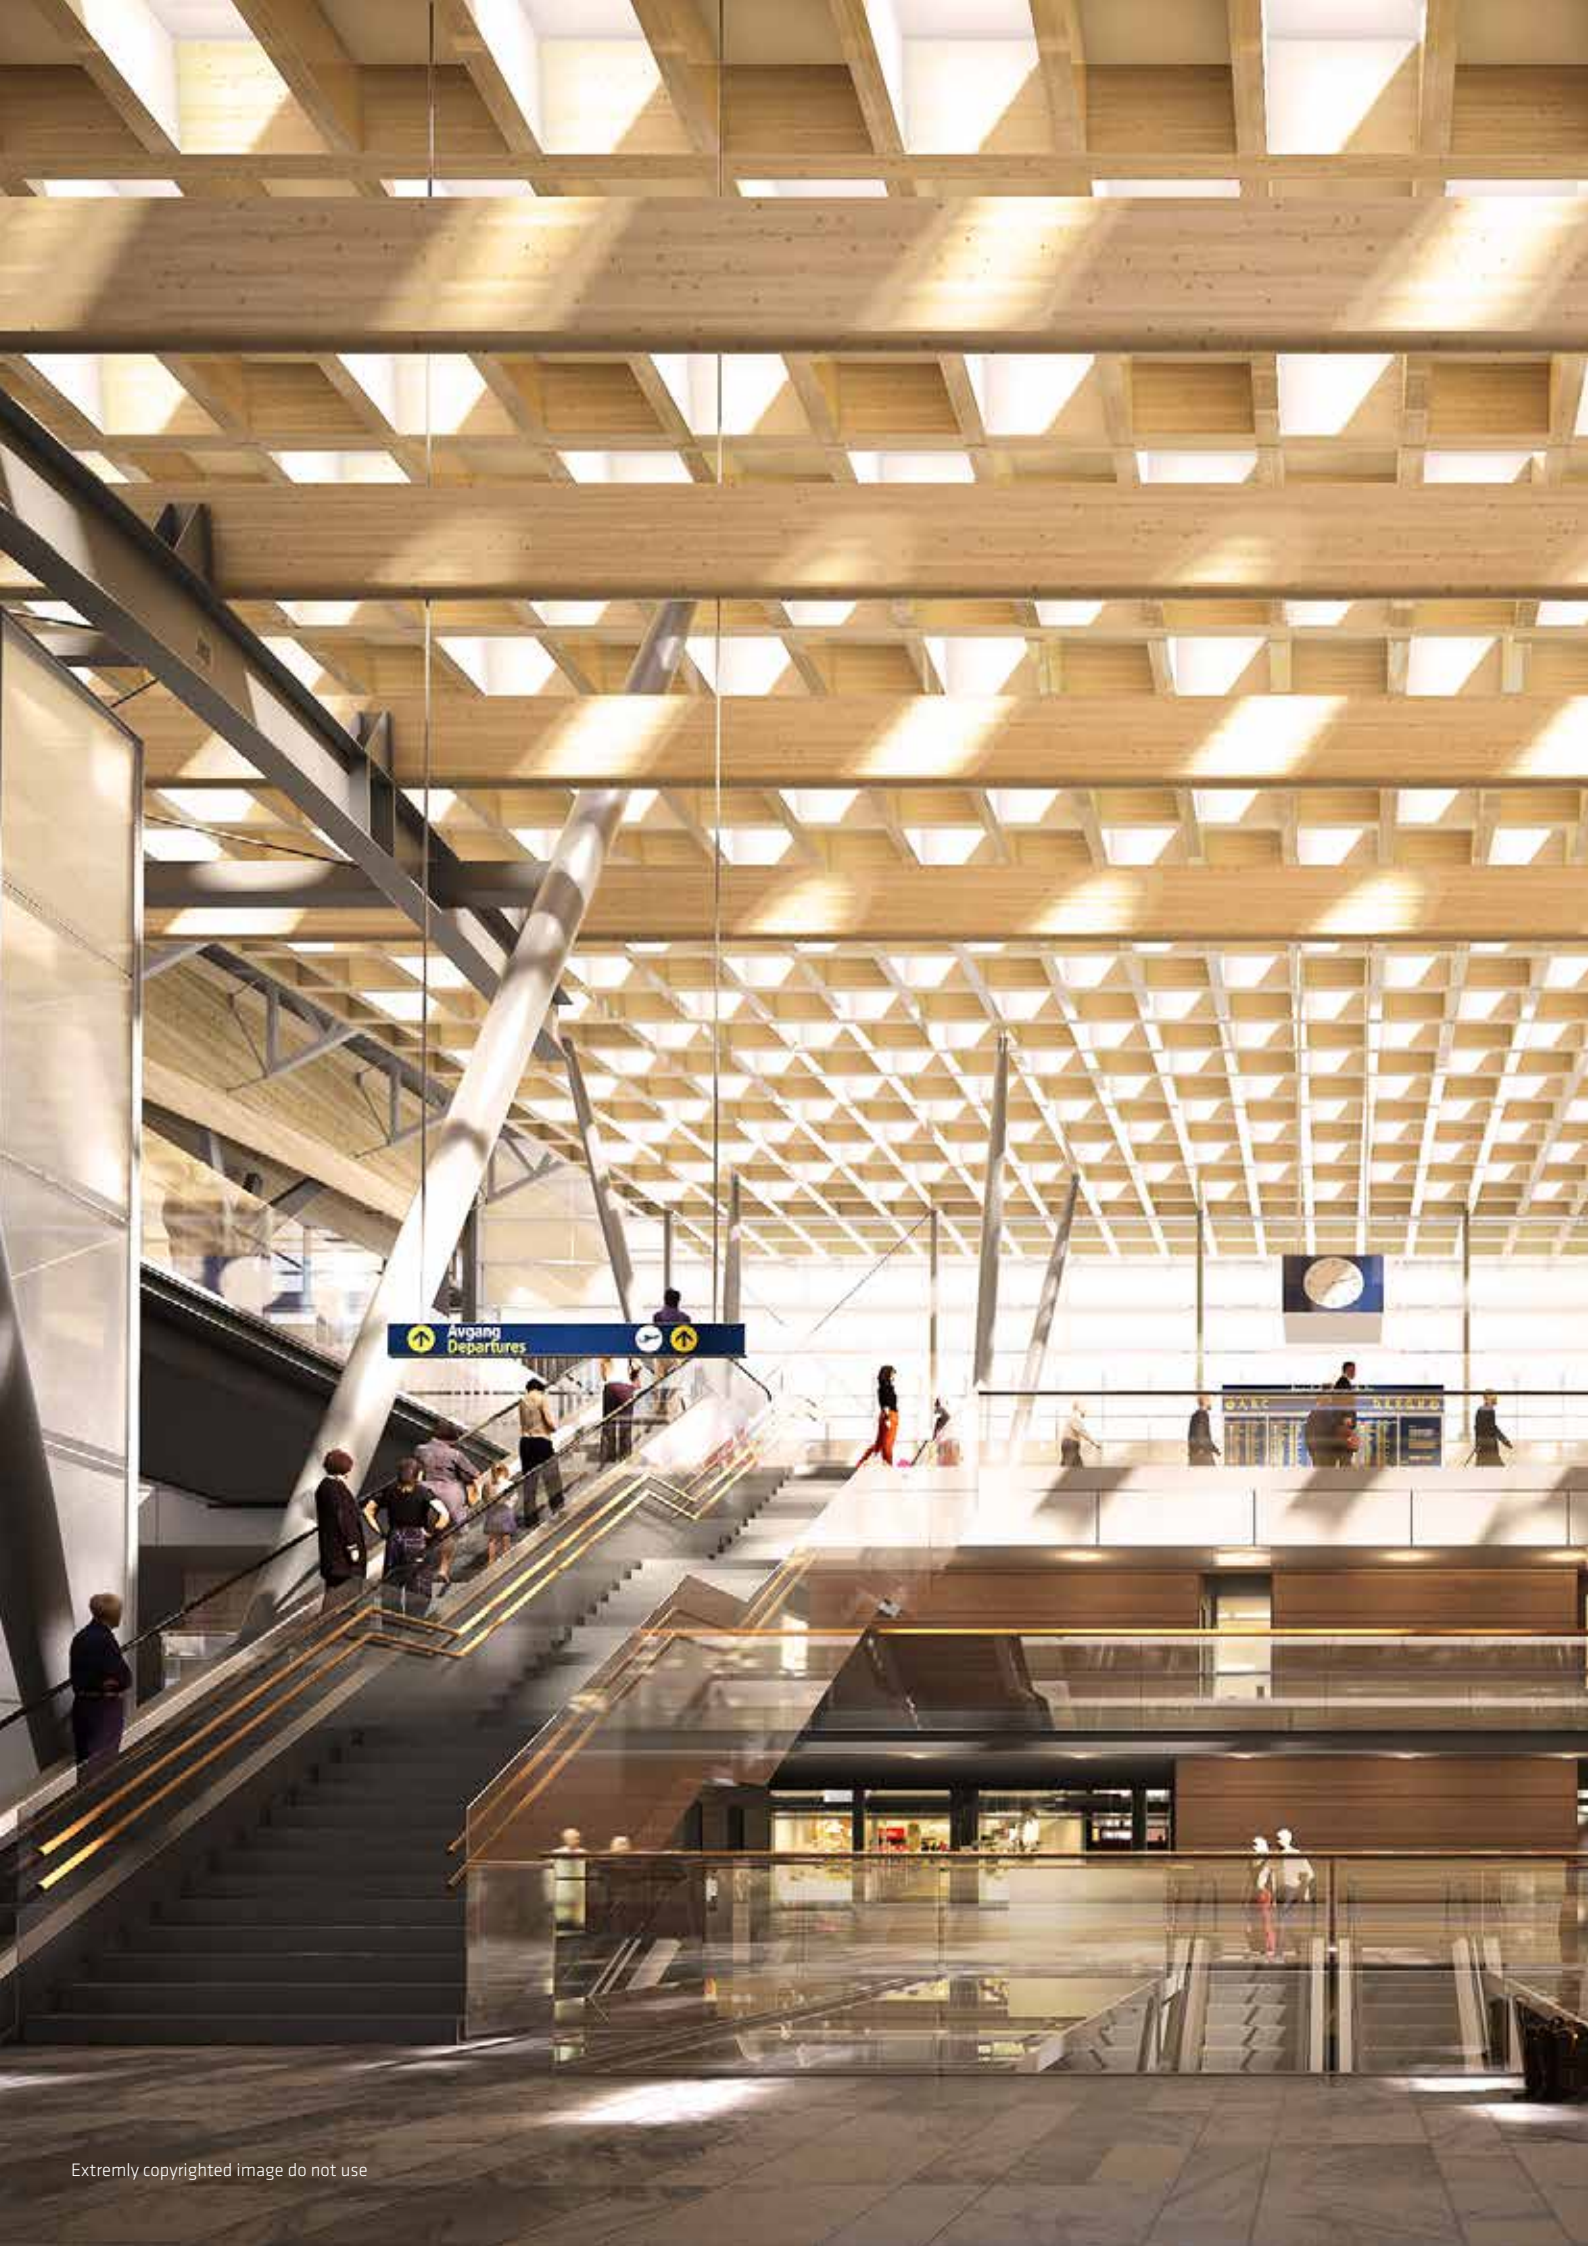

PROJECT REQUIREMENT

THE ARCHITECTURE AND PLANNING of the expansion represents a further development of Norwegian building traditions, with extensive use of natural materials and simple, down-to-earth solutions. As building owner OSL is pointing out: “we want our terminal expansion to set a good example with regard to the environment.

We have a particular focus on renewable energy and greenhouse gas emissions.” The project has a goal of achieving the environmental classification BREEAM-NOR ‘Excellent’. The demanding requirements of BREEAM-NOR select the best products and solutions.

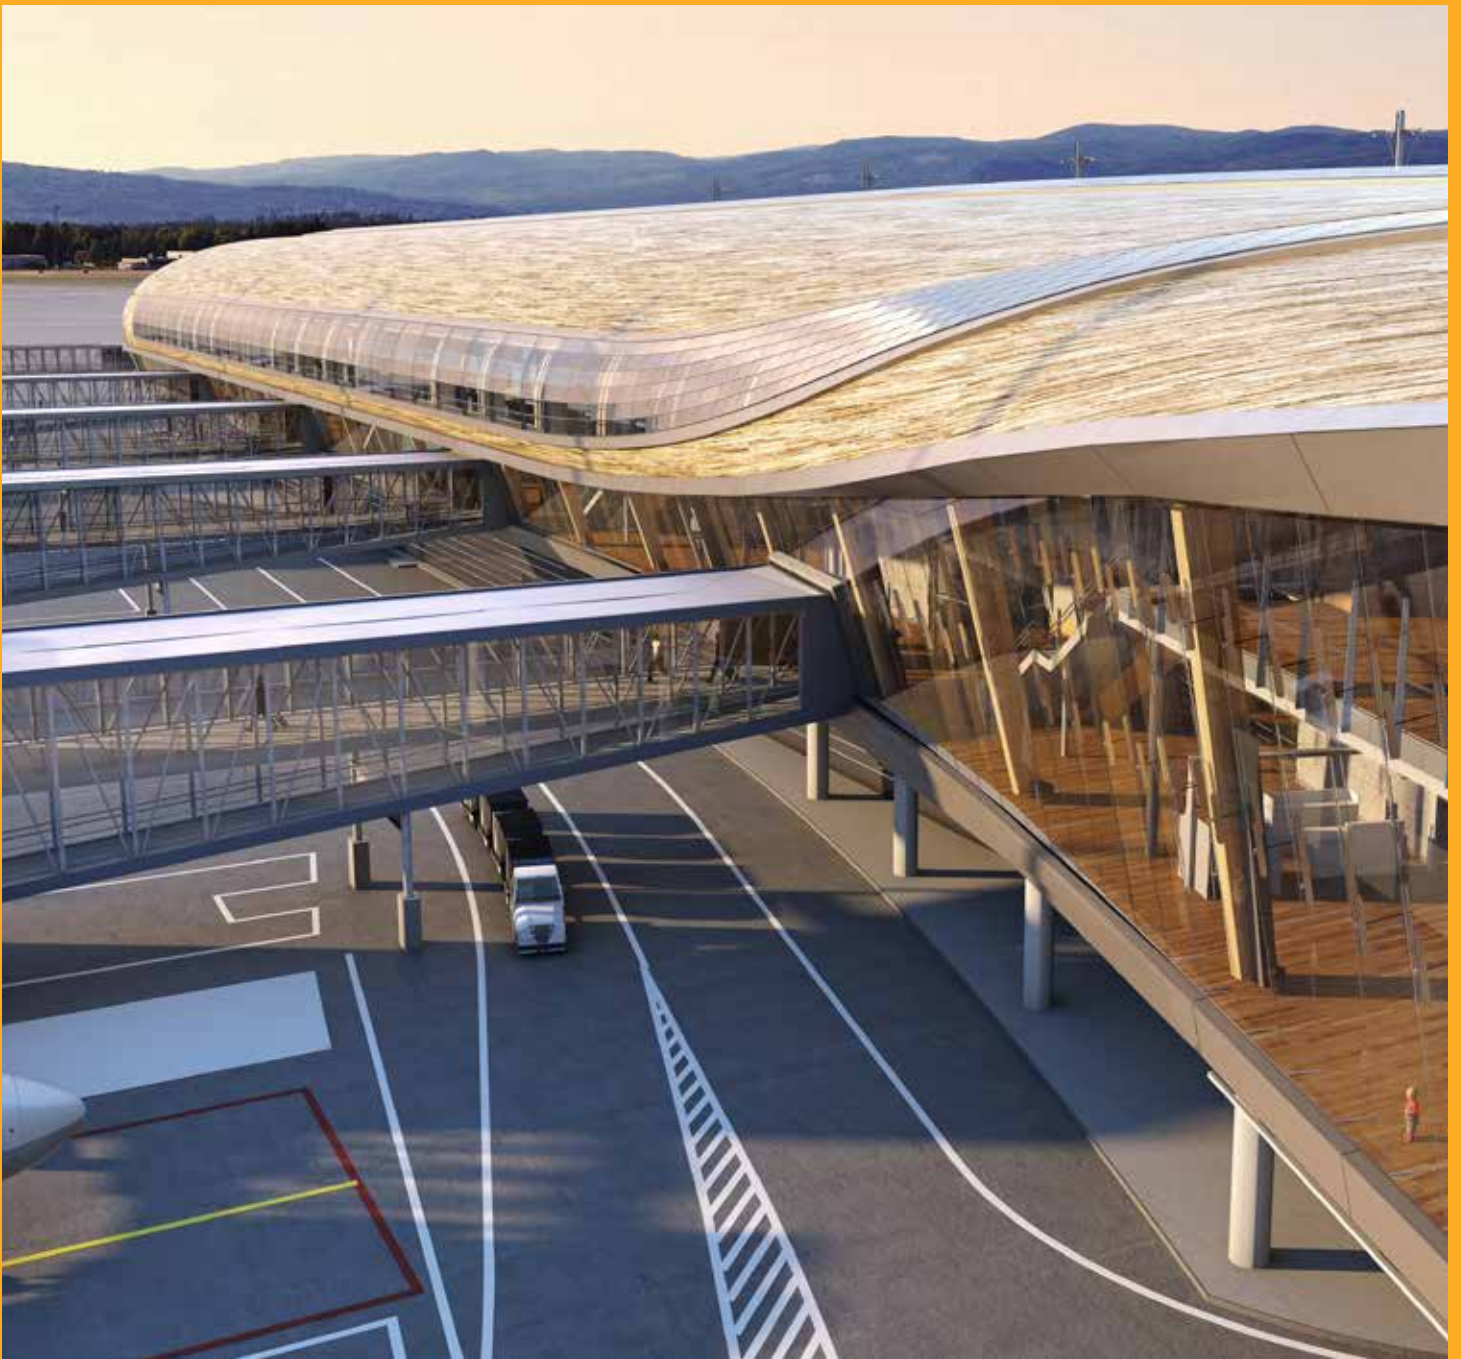

CUSTOMER	PRODUCT
Unicon	Sika Viscocrete GM-700
Spenncon (Consolis)	Sika Viscocrete PC-35
Spenncon (Consolis)	SikaHyflex-250 Facade
Skanska	Antisol-ES
Øyan & Schie	Sikaflex AT Connection
Parkett Partner	Sikabond-52 Parquet
Profil Team	Sikasil SG-500, Sikasil SG-20, Sikasil WS-305
Optimera	Sikaflex 11FC+ and SikaTack panel tape
Opticon	Sikadur-32
